**About Community Internet Access**

Community Internet Access is unique from cellular or for-profit offerings. Our mission is to promote and build wireless networks through community support and education.

PTP partners with local area Internet Service Providers, city agencies, businesses and individuals. PTP has recently begun acquiring equipment from the defunct for-profit Wifi Project once known as Metro-Fi. We are re-deploying this equipment in a non-Profit configuration (i.e. No ads or throttled speeds) on Portland main-streets and neighborhoods across town.

Similar to what we are looking to accomplish on Woodstock, PTP built and maintains a network on North Mississippi Ave in North Portland that is used constantly by businesses, patrons and residents alike. We also have free Internet access in Pioneer Courthouse Square, all Lucky Lab locations and nearly 100 individual 'nodes' throughout the Portland area.

We are in search of rooftops along Woodstock Blvd. to mount antennas and a single location to install the Internet Access that will serve the Antennas.
