

The Personal Telco Project

www.personaltelco.net

What Are We?

- 100% Volunteer Non-profit Corporation
- “We are here to promote and build wireless networks through community support and education”
- Ad-hoc and decentralized group of interested citizens.

Another FOSS Success Story

- We use Free Open Source Software (FOSS) on the vast majority of our wireless nodes and servers.
- Simply put, without free software, Personal Telco could not afford to operate.
- FOSS and Personal Telco are compatible, both aim to empower people and give them freedom.

What are we up to?

- Personal Telco has over 100 active nodes all over Portland!
- Currently, we are unwiring the Mississippi District on a grant from the Meyer Memorial Trust.

What are we up to?

- Working with local businesses
- Providing documentation
- PTP University
- Experimentation
